26	0.00251	0.0501	99.0	2.99

Squeezed states: $|r\rangle = \exp\left(\frac{r}{2}(a^{\dagger 2} - a^2)\right)|0\rangle = \frac{1}{\sqrt{\cosh r}} \sum_{n=0}^{\infty} \frac{\sqrt{(2n)!}}{2^n n!} \tanh^n(r) |2n\rangle$.

Variances: $V_x(r)/V_x(0) = e^{2r} = V_p(0)/V_p(r)$. Squeezing level in dB: $-10 \log_{10} \frac{V_x(r)}{V_x(0)}$

Photon number moments: $\langle \hat{n} \rangle = \langle \hat{a}^\dagger \hat{a} \rangle = \sinh^2 r$, $\langle \hat{n}^2 \rangle = 3\langle \hat{n} \rangle^2 + 2\langle \hat{n} \rangle$.

Pair number distribution: if $N = 2n$ with PMF $p(N = 2n) = |\langle 2n|r \rangle|^2$ then N has a negative binomial distribution NB ($r = \frac{1}{2}, p = 1 - \tanh^2 r$).
